

Committed to providing you world class services, products and technologies

H2K Technologies' **Site Watch** Internet-based Monitoring Service includes:

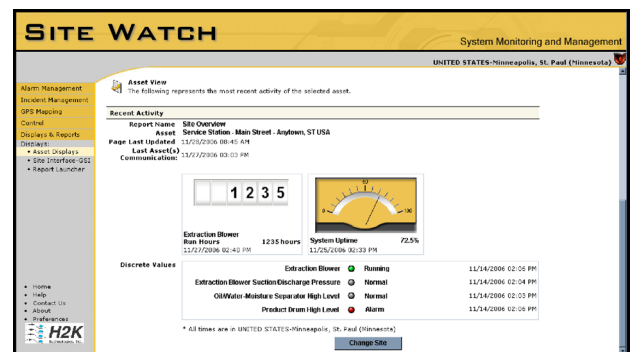

- Remote site monitoring hardware with integral communications capabilities
- Internet-based software so you can monitor your sites from virtually anywhere
- A 24/7 staffed operations center with trained coordinators

Additional features and capabilities include:

- Automated alarm notification via email, text message and pager with operations center backup
- Standard reports: Current Alarms, Alarm History, Site Uptime
- Aggregated views; view all of your sites with one log-in, even compare sites (alarms, uptime)

Our remote monitoring hardware comes with inputs and outputs to match most any project, and can easily be applied to a new equipment installation or an existing site. It utilizes digital cellular (GSM/GPRS) communications, and even has built-in GPS capability. It is designed for extreme environments with a wide operating temperature range and a NEMA 4X enclosure. Low power consumption makes it suitable for battery-backed power applications.

The Internet-based monitoring software allows you to monitor your sites from virtually anywhere. Each site has an overview graphic display as shown above. In addition, current and historical alarm displays and reports, and the ability to view multiple sites via one log-in are all standard features. GPS mapping and driving directions are available as an option.

The 24/7 staffed operations center provides data collection and management, alarm monitoring, backup alarm handling and other optional reports and services.

As a leading manufacturer of water and air treatment equipment and systems, we can provide a turn-key solution for all of your industrial or municipal water and air treatment needs.
